Product Change Notification

SBG Systems

3bis, chemin de la Jonchère
92500 Rueil-Malmaison - FRANCE

1. Purpose

In order to improve production reactivity as well as product performance, SBG Systems has decided to review the options portfolio of the Ekinox series.

It appeared that the A2 accelerometer option did not provide any performance improvement compared to the higher range, A3 option. In addition, the A3 option provides better vibration immunity.

As a result, it was decided to remove the A2 type from the Ekinox option portfolio.

A3 version pricing becomes now aligned with older A2 version for seamless transition.

2. Affected products; replacement parts

Obsolete product	Description	Replacement product	Effective Date
EKINOX-#-G4A2-PS	5g range version	EKINOX-#-G4A3-PH	10g range version

Note that the A1 (2g) range remains the standard for marine applications.

3. Transition from A2 to A3

SBG Systems don't expect any action to be taken by customers to re-qualify a system that was operating a A2 unit with the A3 version.

A3 accelerometer ranges provides similar or better performance on every performance parameters.

Software side is also not affected by this modification and a full compatibility with existing software is expected.
